

HARI NANDAN

+91 7736986963 · harinandan0555@gmail.com · github.com/deltrexgg · linkedin/in/harinandan0555
Calicut, Kerala, India

SKILLS

Languages: Go (Golang), TypeScript, JavaScript

Frameworks & Libraries: React.js, Next.js, React Native (Expo), Node.js, Gin, Capacitor.js

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Infrastructure: Docker, Kubernetes, AWS, Nginx, HAProxy, Dokploy, gRPC, Gorm

Design Tools: Figma

EXPERIENCE AND WORKS

ServiceBill (SaaS)

June 2026

Backend Development / Deployment

Accomplishments:

- Architected and deployed a multi-tenant SaaS billing engine using Go (Gin) and PostgreSQL, successfully supporting a dynamic pay-as-you-go pricing model across multiple active service centers.
- Designed a high-throughput gRPC communication layer and implemented Redis caching, reducing backend latency for the admin portal and mobile client.
- Owned the end-to-end database schema design using Gorm, implementing strict data isolation boundaries to guarantee security and compliance across tenant environments.
- Streamlined deployment infrastructure by containerizing the distributed backend using Docker, reducing local-to-production deployment overhead.

Salesgo (Freelance)

August 2025

Backend Development / Deployment

Accomplishments:

- Engineered a scalable delivery management backend using Node.js and MongoDB to handle logistics, route updates, and order states for 40+ concurrent drivers and 3,000+ customers.
- Designed and provisioned AWS cloud infrastructure utilizing Docker and Nginx as a reverse proxy, achieving 99.9% uptime for critical real-time delivery tracking.
- Optimized MongoDB query performance by establishing efficient indexing strategies for geographic and driver location data, preventing database bottlenecks during peak delivery hours.
- Collaborated in an agile 3-person team to translate complex B2B supply chain requirements into high-performance, maintainable REST APIs.

RKM School Mobile App (Freelance)

Jan 2025

Full Stack Developer

Accomplishments:

- Architected and launched a cross-platform mobile application using Capacitor.js and Firebase to automate an inter-class performance competition, actively used by 50+ faculty members.
- Implemented an automated ranking and leaderboard algorithm to process daily faculty inputs, compute rolling point averages, and programmatically determine winning cohorts.
- Optimized the real-time NoSQL data layer to securely sync evaluations from dozens of concurrent teachers, ensuring instant, conflict-free database writes during peak assessment windows.
- Owned the full Software Development Lifecycle (SDLC) as a solo engineer, transforming a manual, paper-based judging process into a scalable digital application.

Web Developer Intern

Accomplishments:

- Engineered consumer-facing components for the Qikz short-form video platform using Next.js, driving user engagement and streamlining mobile web performance.
- Implemented real-time data sync for a high-visibility election-tracking widget featured directly on the Mathrubhumi.com homepage, managing high-concurrency client requests during peak traffic events.
- Optimized web application lifecycle and state hydration to ensure zero-lag DOM updates and sub-second rendering for critical live-updating news features.

PROJECTS

Self-Hosted Local LLM Infrastructure & CLI Platform (Homelab Ecosystem)

- Architected and provisioned an on-premise private AI platform by converting a bare-metal Linux server into an isolated local cloud infrastructure environment.
- Engineered a high-efficiency Go CLI client (tai) that communicates asynchronously via low-latency HTTP streams with a locally orchestrated Qwen GGUF model running in server mode.
- Orchestrated a containerized inference runtime using Docker, implementing resource optimization bounds to manage local compute load and ensure instantaneous binary tool startup times.
- Hardened platform security boundaries by implementing a strict UFW firewall policy and establishing secure SSH tunneling to completely eliminate public internet exposure of private data.
- Configured Nginx as a local reverse proxy to manage secure traffic routing, stream parsing, and error-handling abstractions between the command-line client and internal containerized model endpoints.

EDUCATION

Msc Computer Science

IHRD college , Calicut University | 2024-2026

Relevant coursework in Structural Design and Project Management.
